**AP Calculus BC**  
*Grade 12*

Advanced Placement Calculus BC closely follows the guidelines and topics of the most recent College Board Advanced Placement Course Description. This course covers the same material as AP Calculus AB with the addition of sequences and infinite series as well as parametric, vector, and polar functions. The content in this course is covered at a faster speed and in greater depth than in AP Calculus AB such as also learning L'Hôpital's Rule during discussion of limits and derivatives. At the end of the course, students are prepared to take the AP Calculus BC exam. All students are required to take the AP Calculus BC exam in May upon completion of the course.
