AP Statistics

Grade 11/12

Advanced Placement Statistics closely follows the guidelines and topics of the most recent College Board Advanced Placement Course Description, which is the summary of concepts needed for preparation for the Advanced Placement Examination. This course involves the study of four main areas: exploratory analysis, planning a study, probability, and statistical inference. In contrast to many math classes, this course will require reading of the text. This AP Statistics course is taught as an activity-based course in which students actively construct their own understanding of the concepts and techniques of statistics. All students are required to take the AP Statistics exam in May upon completion of the course.
